Claims

[c1]	1.A method of approving a document comprising:
	storing the document in a central storage area, the storage area preventing
	alternation or modification of the document;
	advising an approver that the document requiring approval is accessible for
	review and approval;
	allowing the approver to review the document;
	prompting approval by the approver;
	recording the date of approval; and
	recording the approved document.
[c2]	2.A method as recited in claim 1 further comprising the step of generating
	an approval log.
[c3]	3.A method as recited in <u>claim 2</u> further comprising associating the approval
	log with a unique file record.
[c4]	4. A method as recited in claim 3 further comprising processing the approval
	log into an XML file.
[c5]	5.A method as recited in claim 1 further comprising multiple approvers
[]	approving a document and recording each approver"s approval.
•	
[c6]	6.A method as recited in <u>claim 1</u> wherein the advising step comprises
	providing an email to the approver and proving a hyperlink to the document.
[c7]	7.A method as recited in claim 1 wherein the document is selected from a
	group consisting of a patent application, a trademark application, an
	assignment document and a power of attorney.
[c8]	8.A method as recited in claim 1 further comprising the step of allowing
[co]	access to the central storage area to view the approval record.
	access to the central storage area to view the approval record.
[c9]	9.A method as recited in claim 1 further comprising displaying approval text
	to the approver and storing this approval text in the central storage area.

- [c10] 10. A method of hosting a docketing system on an internet accessible server comprising:

 authenticating the identity of a user that logs into a client-based authentication program;

 directing the user to the server; and encrypting the transmissions between the server and the user.
- [c11] 11. A method as recited in <u>claim 10</u> and further comprising transmitting a digital certificate from the client-based authentication program to the docketing system, determining the authenticity of the digital certificate and allowing access to the docketing system for authorized users.
- [c12] 12. A method as recited in <u>claim 10</u> and further comprising transmitting the IP address of the client-based authentication program to the docketing system, and allowing access to the docketing system for authorized IP addresses.
- [c13] 13. A method as recited in <u>claim 10</u> and further comprising obtaining user identifying information from a directory server and transmitting the user identifying information to the docketing system.
- [c14] 14. A method as recited in <u>claim 13</u> and further comprising storing the user identifying information on the user"s computer and the docketing system reading the stored information.
- [c15]

 15. A method of transferring data between a first computer having a first database and a second computer having a second database comprising: directing the first computer to email the second computer a notice containing a hyperlink that a message is pending; directing the second computer to communicate with the first computer using the hyperlink; directing the first computer to query the first database and prepare an XML file containing the transferring data; and transferring an XML file from the first computer to the second computer, the

[c23]

internet accessible server.

	XML file containing the transferring data.
[c16]	16. A method as recited in <u>claim 15</u> and further comprising parsing the XML file into records that are stored in the second database.
[c17]	17. A method as recited in <u>claim 15</u> and further comprising notifying a user that the data transfer has occurred.
[c18]	18. A method as recited in <u>claim 15</u> wherein the first computer is a USPTO computer and the second computer is a recipient of a USPTO office action.
[c19]	19. A method as recited in <u>claim 18</u> wherein the transferring data is a USPTO office action.
[c20]	20. A method of citing references as part of an electronic submission process comprising the steps of: recording a citation to the reference in a docketing system; recording a method to retrieve the cited reference from an internet accessible computer; exporting the citation and retrieval method as an XML file; and transferring the XML file as part of the electronic submission process.
[c21]	21. A method as described in claim 20 wherein the retrieval method is a URL
[c22]	22. A method as described in claim 20 wherein the electronic submission process is a patent application.

23. A method as described in $\underline{\text{claim 20}}$ wherein the reference is stored on an
